

# Special Report on Gum Disease from David Snape

---

Hello! Today, I have a special report about gum disease for you. As you may or may not be aware, a great deal of time was spent writing and researching the book: ***What You Should Know About Gum Disease***.

Writing is a lot of work, and the work is never completed. This is an update that may wind up in the next edition of the book.

I have not discovered this myself. It's actually used quite a bit but somehow this information never makes it to the mainstream.

How would you like to save by cutting out all of those great mouthwashes that I've told you about before? CloSYS and [Perio-Therapy](#) are the two **oxygenated** mouthwashes that I've discussed with you (if you have read the book) in detail.

But, if you really think about it, mouthwash is a consumable product. That means you have to keep buying it to get the great benefits it gives. For Example, let's take CloSYS. CloSYS comes in a 32 ounce bottle which is the most cost effective way I have found to buy it.

It still costs me around \$12 per bottle. That will last me approximately 2 weeks. In addition, it is a bit heavy on the chlorine in my opinion. ([Perio-Therapy](#) does not have the chlorine issue)

## The Solution to This Problem

What if you had a way to make almost instant **oxygenated** water that you could then use as an oxygenated mouthwash? This can replace all of your mouthwashes and even be used to disinfect your toothbrush. You could save thousands of dollars on the mouthwashes that you won't be buying any longer.

What is this mystery device that can oxygenate your water? It is a [home ozone generator](#).

Somewhere in the back of my mind, I had been meaning to investigate ozone. Then I received a reminder via the story that this nurse shared with me: <http://www.ozoneforwater.com/home-ozonator.html>

So, I pulled out my ozonator and inside the instruction manual it says something like: "ozone is also used to fight periodontal disease (gum disease)". Ok, I had figured as much.

Special Tip: Ozonate the water for your Hydro Floss for 5 to 10 minutes, let sit 5 minutes before use. This will put the power of oxygen into your [Hydro Floss](#)!

Having a home ozone generator for water may also convey additional benefits:

**Important:** We are only discussing ozonating water and oil here, not air. Breathing ozonated air may be hazardous to your lungs.

Here is a partial list:

It can be used to clean fruits and vegetables.

It has been used to reduce infections

It can kill bacteria and viruses

Put some in with your laundry and it can reduce the amount of soap you need.

O<sub>3</sub> (ozone's chemical symbol) is 5 times more powerful than molecular chlorine at killing viruses and bacteria

People drink ozonated water for health reasons

You can use a home ozone generator to make ozonated water that cleans your toothbrush

People make ozonated oils and they eat a tablespoon or two per day

Some would say that ozone can treat cancer – others do not agree.

Some say it can kill the herpes virus and other viruses that attack the body, again, some do not agree.

Ozone Therapy is very well accepted in Europe –

It is used for purifying water

Some use ozonated oils topically to treat skin conditions

There is much more...

Next: Read more about [home ozone generators](#) (The one that I'm using)

Today... A Veterinarian called me and she has been treating horses with ozone for many years. Everything from a common but deadly protozoa infection to 'bathing' wounds in ozone... Her method of delivery is a bit different than what the machine I have is capable of, but I think it is important to know about this.

There is a lot of information out there about ozone. My point is, you should think about harnessing the power of ozone (in water and oil) for your own life - and with the savings on mouthwashes and other things, you will more than make up for the cost of it in less than 1 years time. Look at the next page for links that lead to more information

Next: Look at this home [ozonator coupon code](#). Or visit: <http://www.OzoneForWater.com> for more information.

If you have any questions, please feel free to ask me!
